Fleet Management Application User Guide

The Fleet Management application is distributed as an APK file hosted on a GitHub Pages website. Users must manually download and install the application on an Android device. Because the application is not installed through the Google Play Store, Android must be configured to allow installations from unknown sources. After installation, users can launch the application from their device and begin managing vehicles and maintenance records immediately without creating an account or logging in.

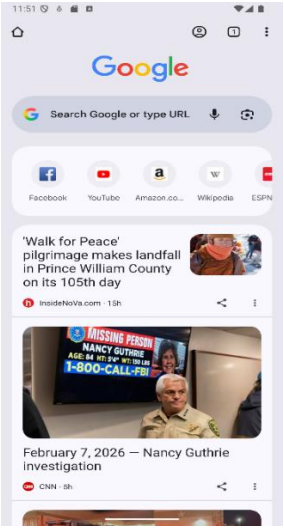
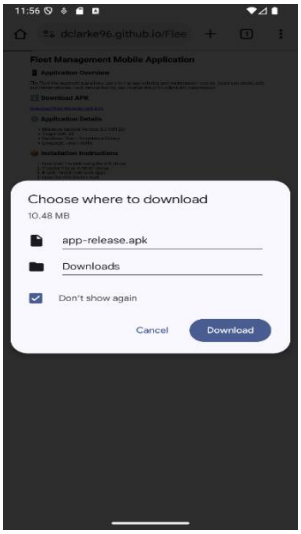
Installing the Application

1. Open a web browser on your Android device.

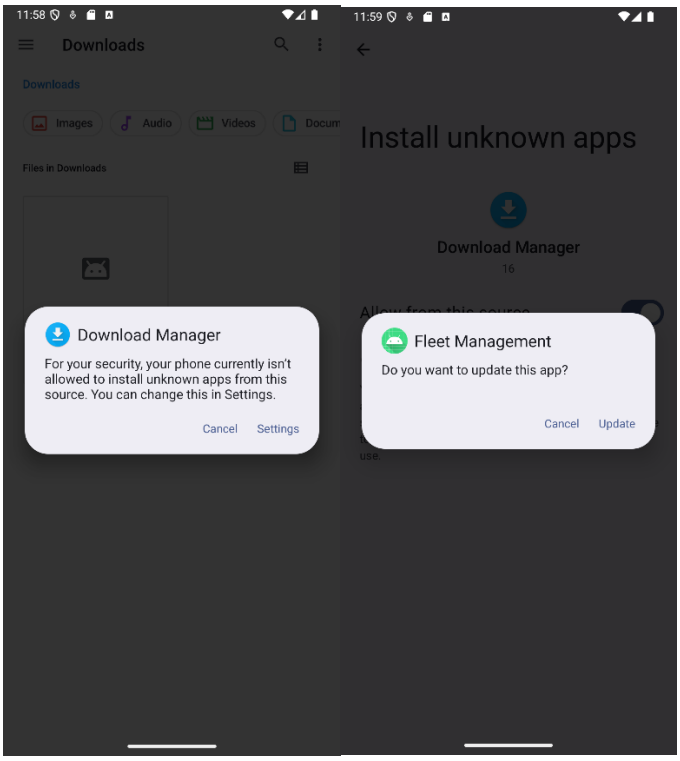


2. Navigate to the hosted Fleet Management application webpage.

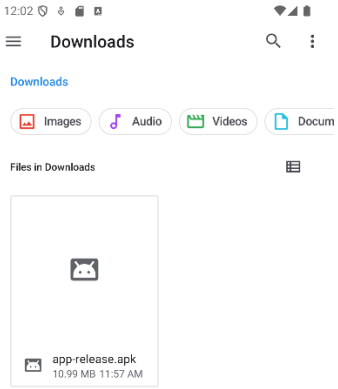
3. Locate and tap the **Download APK** link.



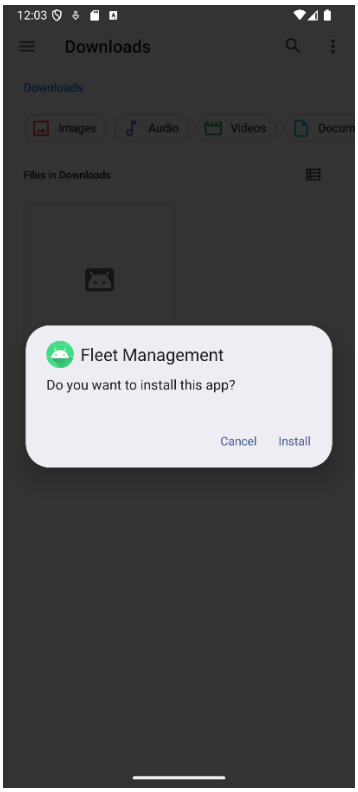
4. When prompted, allow downloads from unknown sources if the device requests permission.



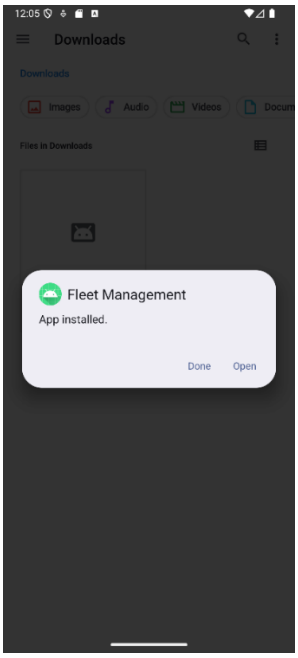
5. Open the downloaded APK file from the device's notification panel or Downloads folder.



6. Tap **Install** and wait for installation to be completed.



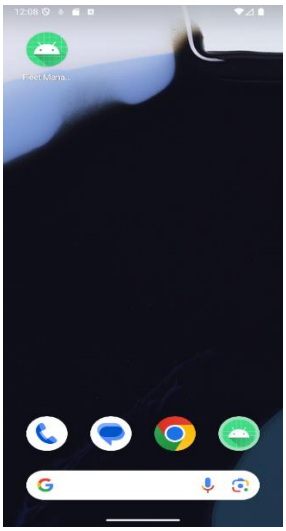
7. Tap **Open** to launch the application.



After installation is complete, the application icon will appear in the device's app drawer and can be opened at any time.

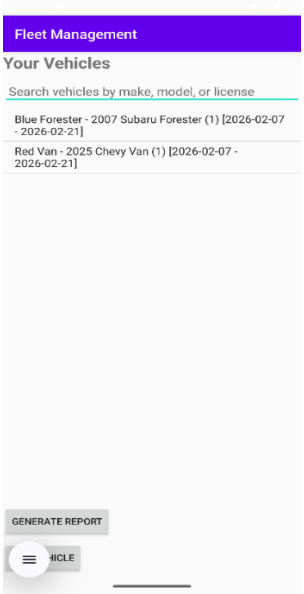
Launching the Application

1. Locate the Fleet Management application icon on your Android device.



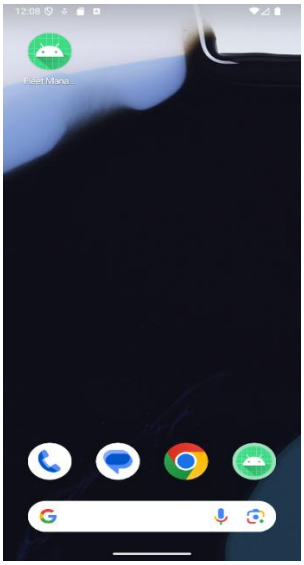
2. Tap the application icon to launch the app.

3. The main vehicle list screen will load automatically.



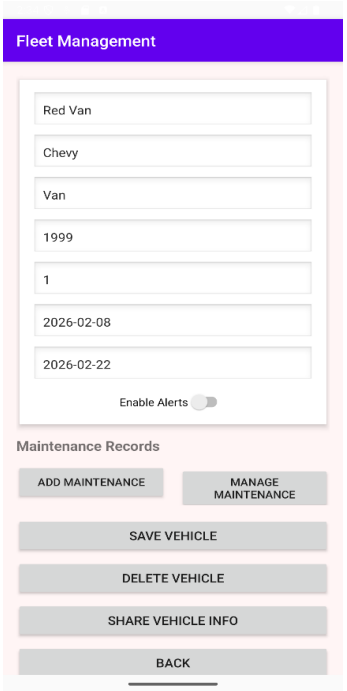
Viewing Vehicles

1. Open the Fleet Management application.



2. View the list of vehicles displayed on the main screen.

3. Scroll vertically to browse existing vehicles.
4. Tap any vehicle entry to open the detailed vehicle view.

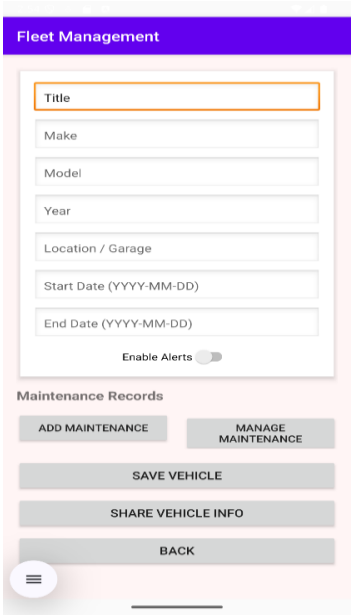


Opening a vehicle allows users to see full vehicle information and access maintenance records associated with that vehicle.

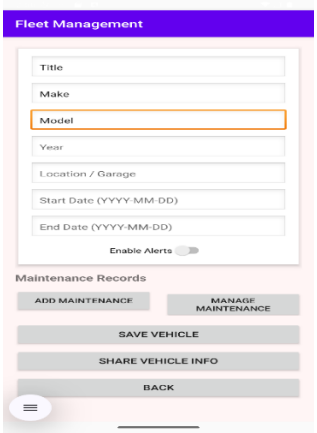
Adding a New Vehicle

1. From the main vehicle list screen, tap the **Add Vehicle** button.

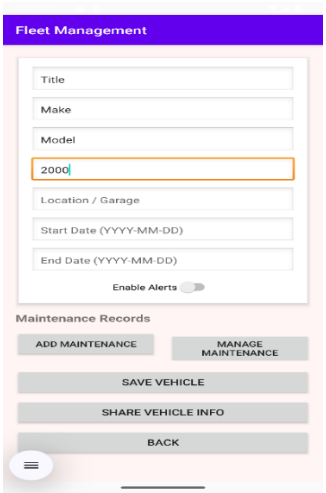
2. Enter the vehicle title.



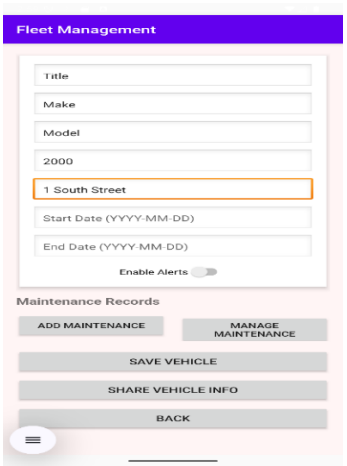
3. Enter the vehicle make and model.



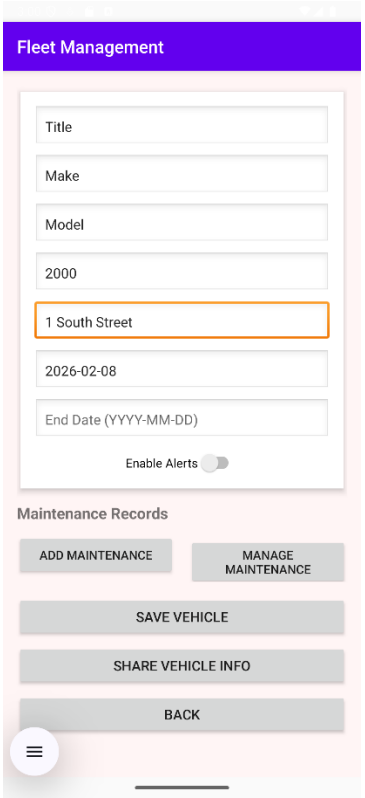
4. Enter the vehicle year.



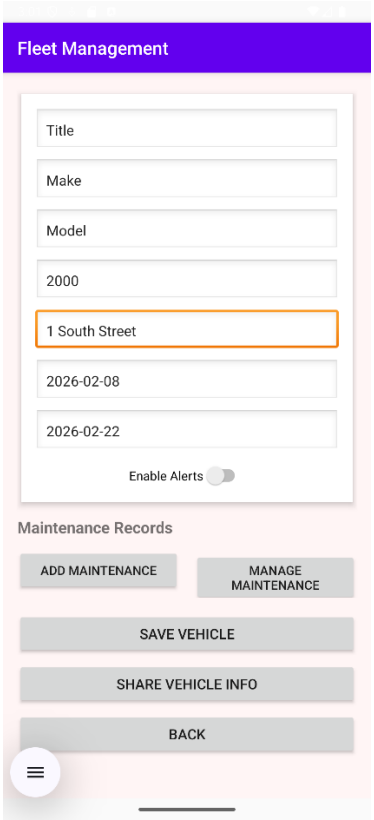
5. Enter the storage location.



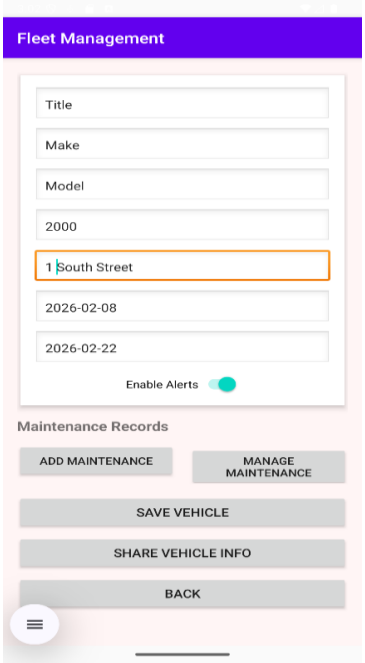
6. Enter the start date.



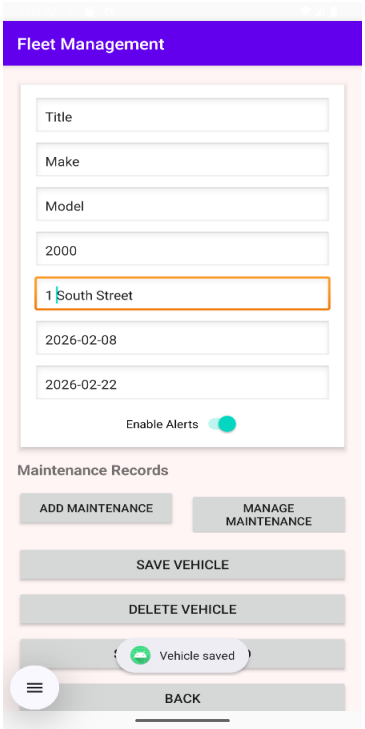
7. Enter the end date if applicable.



8. Enable maintenance alerts if desired.



9. Tap **Save** to store the vehicle.

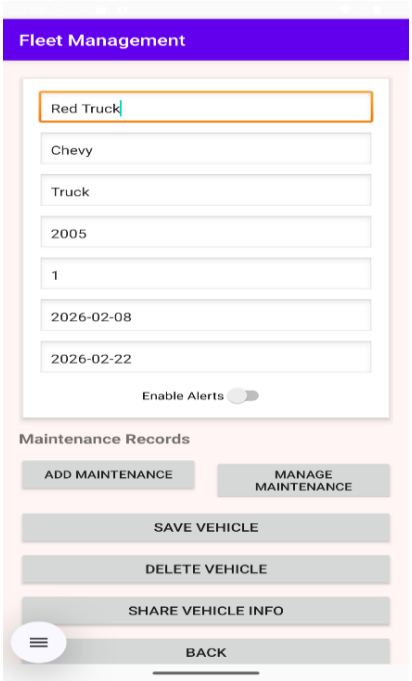


If all required fields are valid, the vehicle will appear in the main vehicle list immediately after saving.

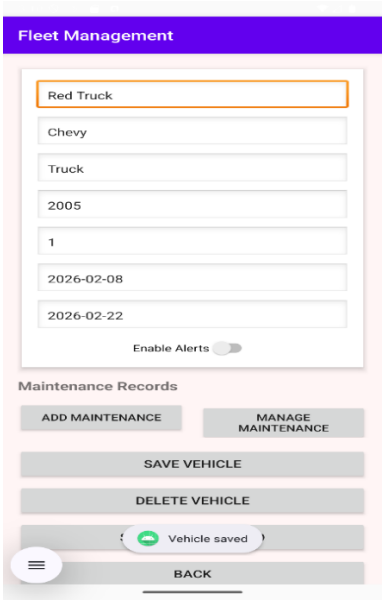
Editing an Existing Vehicle

1. From the main vehicle list, tap the vehicle you want to edit.

2. Modify any field including title, make, model, year, location, or dates.



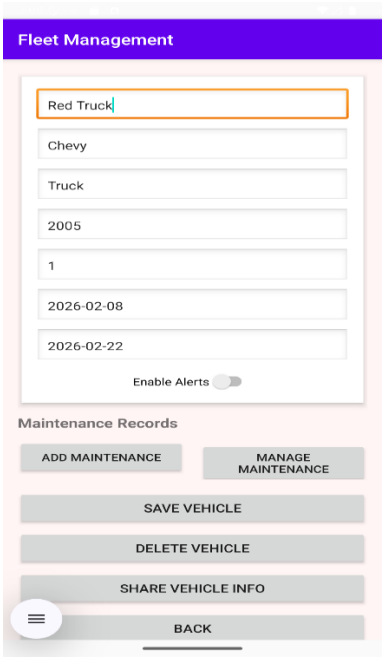
3. Tap **Save** to update the vehicle.



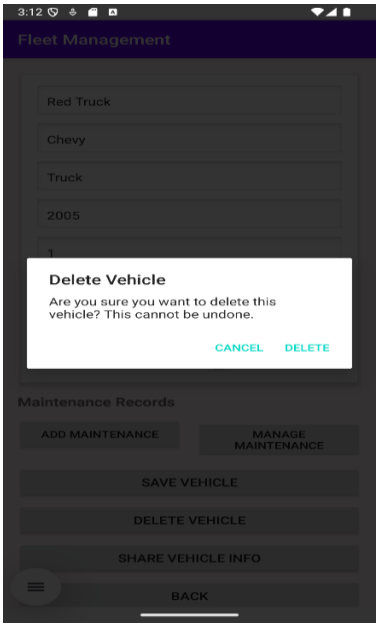
After saving, the application updates the database and displays the updated vehicle information.

Deleting a Vehicle

1. Open the vehicle detail screen.



2. Tap the **Delete** button.
3. Confirm the deletion when prompted.

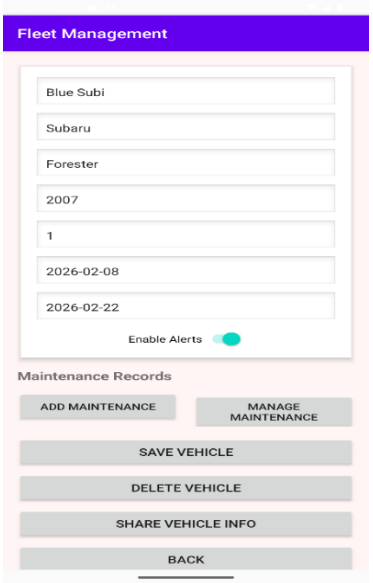


Vehicles with associated maintenance records cannot be deleted until maintenance entries are removed. This prevents accidental data loss and maintains database integrity.

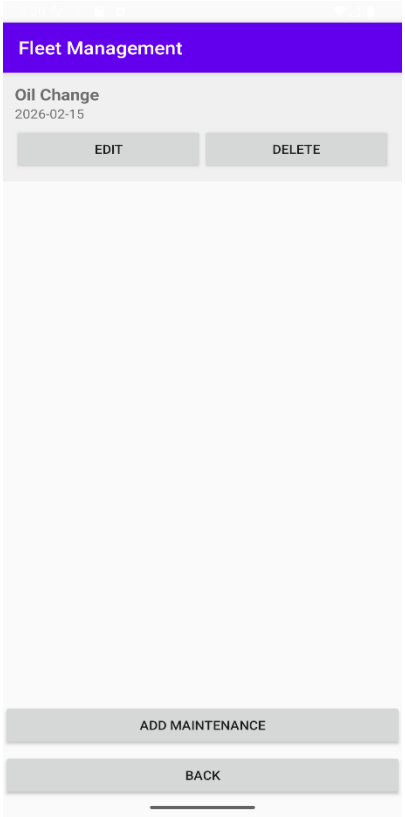
Viewing Maintenance Records

1. Open a vehicle from the main vehicle list.

2. Tap the **View Maintenance** or equivalent button.



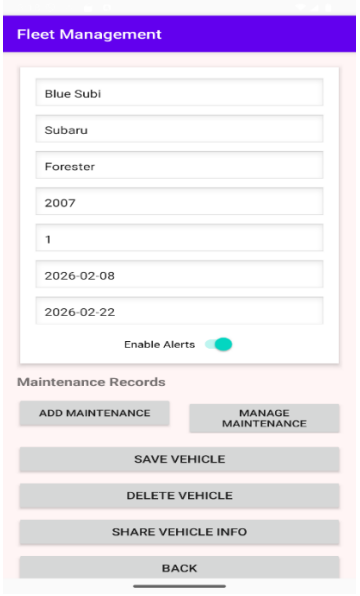
3. Review the list of maintenance entries tied to that vehicle.



Maintenance records are displayed in chronological order to help users track vehicle service history.

Adding a Maintenance Record

1. Open a vehicle detail screen.

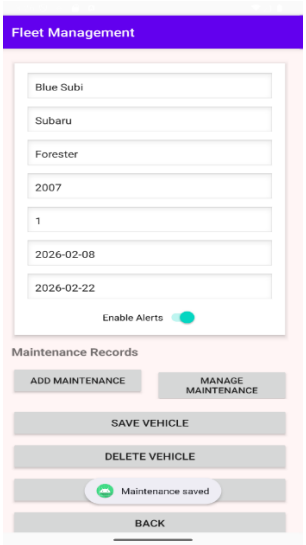


2. Tap **Add Maintenance**.
3. Enter the maintenance title.

4. Enter maintenance date.

5. Enable alerts if needed.

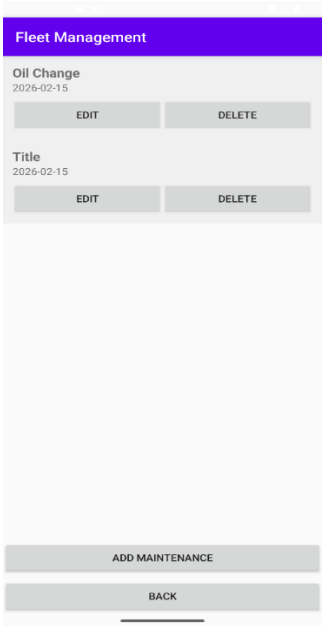
6. Tap **Save**.



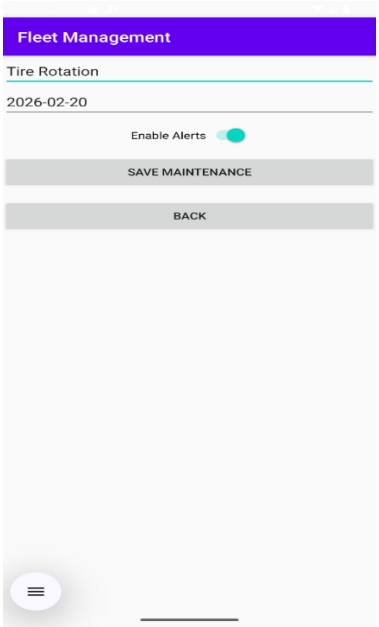
Maintenance entries must fall within the vehicle's date range. If invalid dates are entered, the application will display a validation message.

Editing a Maintenance Record

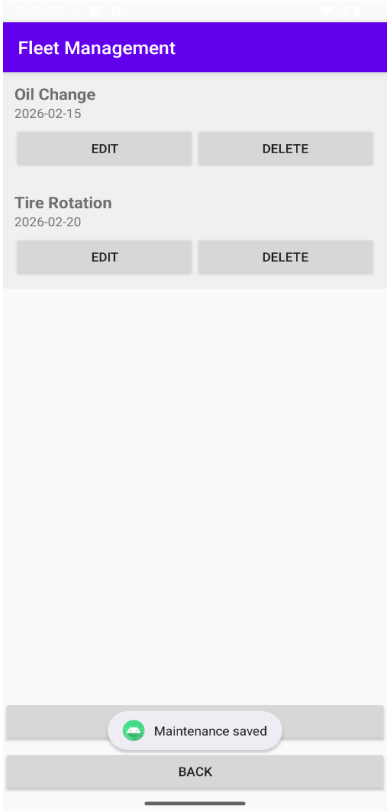
1. Open the maintenance list for a vehicle.



2. Tap Edit on the maintenance record.
3. Update any field.



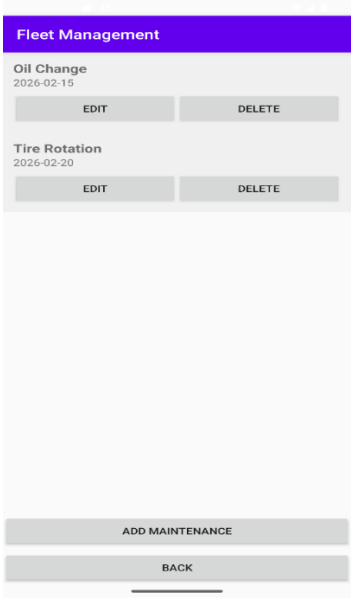
4. Tap **Save** to apply changes.



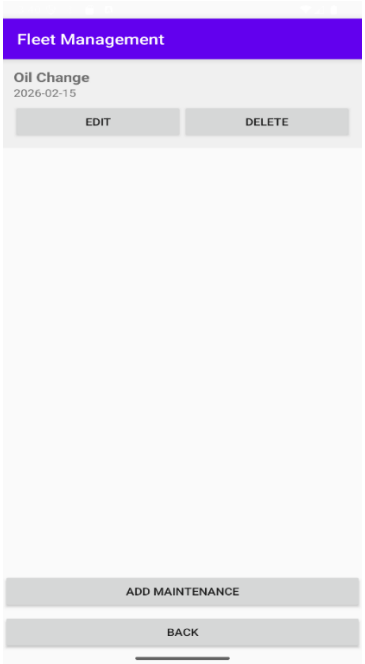
Changes are immediately stored in the database and reflected in the maintenance list.

Deleting a Maintenance Record

1. Open the maintenance record from the vehicle screen.



2. Tap **Delete**.
3. Confirm the deletion.

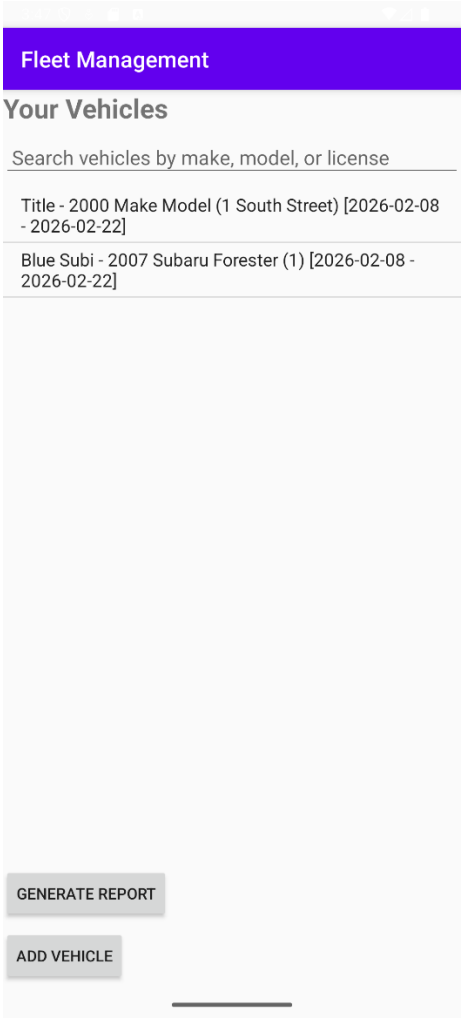


The maintenance record will be permanently removed from the vehicle history.

Searching for Vehicles

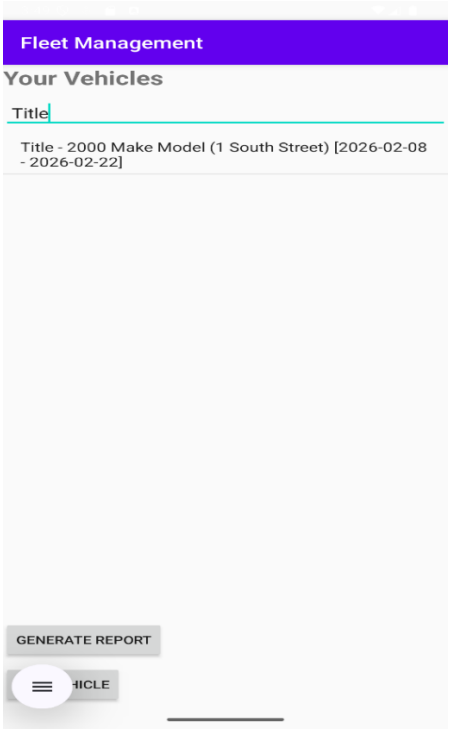
The Fleet Management application allows users to quickly locate vehicles using a search function. This is useful when managing a large fleet or when specific vehicles need to be updated or viewed. The search bar filters vehicles based on text entered in the make, model, title, or location fields.

1. From the main vehicle list screen, locate the **Search** bar at the top of the screen.

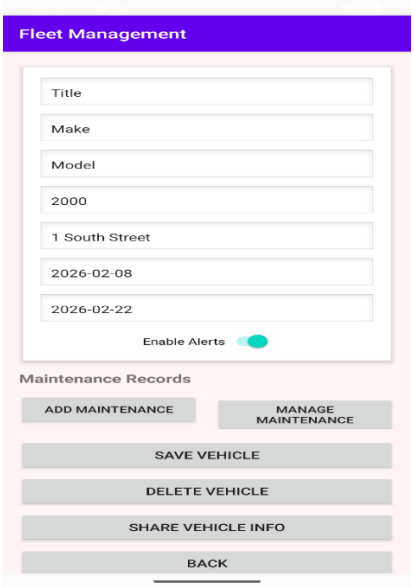


2. Tap the search field and enter the keyword or phrase you want to search for (e.g., a vehicle make, model, or title).

3. As you type, the list of vehicles automatically filters to match your search criteria.



4. Tap a vehicle from the filtered list to view its details or perform actions such as edit or delete.



Using the search ensures you can efficiently find vehicles without manually scrolling through the entire list.

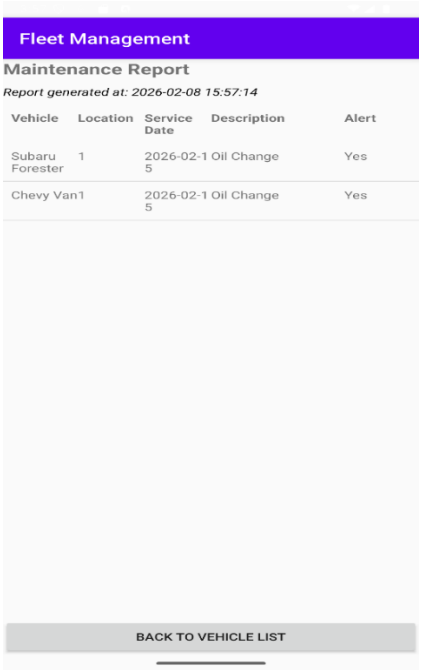
Generating a Report

The application includes a reporting feature that allows users to generate a summary of vehicles and their associated maintenance records. This feature is helpful for reviewing fleet status, maintenance schedules, or printing records for audits.

1. Open the main vehicle list screen.

2. Tap the **Generate Report** button located near the bottom left of the screen.

3. The application will compile vehicle and maintenance data into a report format, for vehicles with scheduled Maintenance.



4. Review the report on-screen. This report allows users to quickly review fleet status and scheduled maintenance activity in a summarized format.
